

# CLOUD BASED DRY-DOCKING & SHIP REPAIRS

Effective collaboration and standard processes,  
at a fraction of the traditional cost and time

We provide an easy to use solution that helps the Superintendent to make best practice specifications, start early planning and provide detailed cost control reports to the management / stakeholders.

## Return of investment from day one

**Reduced cost** A complete specification tool ensures reuse of quality based specifications, yard quotation, timely cost control and effective reporting.

**Standard processes** Ensures a systematic way of working that makes it easy for the Superintendents to do a great job, including early planning and procurement. Works on top of any PMS system.

**Digital collaboration** Implement new digital processes where yards, suppliers and stakeholders are working together in a transparent way that saves time and reduces cost for all parties.

**Condition based management** Receive intelligent data from a wide range of sources, mapped to critical assets. Keep track of status and initiate smart repairs.

**Adaptive implementation** Up and running in hours. Configure your own processes or apply best practices from our partners. No need for any IT investments or technical IT support.

Developed by and with leading ship-owners / managers

In partnership with

We are specializing in technical ship management operations.
